

KRISHNA VAMSI VEERISETTI

AWS DEVOPS ENGINEER | SITE RELIABILITY | CLOUD OPERATIONS

Hyderabad, India | Open to Bengaluru / Relocation | +91 9160547781 | veerisettkrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience in AWS cloud infrastructure, Linux administration, CI/CD automation, and Kubernetes-based production environments. Skilled in Terraform, Jenkins, GitHub Actions, Docker, EKS, Helm, and Argo CD for infrastructure provisioning and automated deployments. Experienced in production monitoring, incident management, root cause analysis, and performance optimization using CloudWatch, Prometheus, and Grafana. Strong understanding of cloud networking, security best practices and troubleshooting complex application issues to ensure reliable, secure, and scalable infrastructure.

TECHNICAL SKILLS

Cloud & Platforms: AWS EC2, VPC, IAM, S3, EKS, ECR, RDS, ALB/NLB, Route 53, CloudWatch; public/private networking, security groups

Containers & Deployment: Docker, Kubernetes/EKS, Helm, Deployments, Services, Ingress, HPA, RBAC, probes, NetworkPolicies, Argo CD

CI/CD & Automation: Jenkins, GitHub Actions, Git/GitHub, Terraform modules and remote state, YAML, Bash/Shell, Python basics

IaC & Automation: Terraform (modules, variables, outputs, remote state, plan/apply); Bash, Python basics; YAML

Monitoring & Reliability: Prometheus, Grafana, AWS CloudWatch, alerts, log analysis, capacity/resource monitoring, production incident triage, RCA

Linux & Networking: Linux administration and troubleshooting, SSH, DNS, TCP/IP, HTTP/HTTPS, TLS/SSL, service/process and resource diagnostics

Security & Quality: IAM least privilege, security groups, Kubernetes RBAC, Gitleaks, Checkov, Trivy, SonarQube, CI/CD security checks

AI-assisted DevOps: GitHub Copilot for accelerating Terraform configuration drafting, Kubernetes YAML generation, CI/CD pipeline scripting and troubleshooting assistance, with manual code review and validation.

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Provisioned and supported AWS infrastructure through reusable Terraform modules, including VPC networking, EC2, EKS, IAM, ECR and application load balancing for cloud-hosted services.
- Supported Linux-based application environments and operational tasks including access/permission checks, service diagnostics, application deployments, log review and resource troubleshooting.
- Developed and maintained Jenkins and GitHub Actions workflows for code validation, build/test, SonarQube analysis, Docker image packaging, Trivy scans, ECR publication and release automation.
- Deployed and maintained containerized microservices on Amazon EKS using Kubernetes manifests, Helm and Argo CD; investigated failed rollouts, service connectivity, ingress routing and pod readiness.
- Monitored availability and performance with CloudWatch, Prometheus and Grafana; investigated CPU/memory trends, container restarts, application errors and infrastructure health.
- Participated in production incident investigation and RCA, working with developers and database teams to restore application availability and identify preventive improvements.
- Applied IAM, security-group and Kubernetes RBAC controls and integrated Gitleaks, Checkov, SonarQube and Trivy into delivery workflows to support secure releases.
- Collaborated with engineering and QA teams during deployments and troubleshooting; maintained infrastructure configuration, runbook-style notes and operational handover information.
- Supported production application reliability by analyzing Linux system logs, monitoring CPU, memory, and disk utilization, and proactively identifying performance bottlenecks to improve system stability and availability.

PROJECT — SUNCOO E-COMMERCE MICROSERVICES PLATFORM

Stack: AWS (VPC, EC2, EKS, ECR, ALB, Route 53, RDS, S3, IAM, CloudWatch), Terraform, Jenkins, GitHub Actions, Docker, Kubernetes, Helm, Argo CD, Prometheus, Grafana.

- Supported a cloud-native e-commerce application comprising user/authentication, product/catalog, inventory, cart, order, payment and related microservices on Amazon EKS.
- Worked with multi-AZ VPC architecture, public ALB ingress, private application workloads and relational database connectivity; supported DNS, security-group and service-routing troubleshooting.
- Maintained the CI/CD flow from Git commit through source/security checks, unit tests, Docker build, vulnerability scanning, ECR push and Helm/Argo CD-based Kubernetes deployment.
- Investigated an Order Service HTTP 503/504 incident involving database connection pool exhaustion by correlating service logs and database connectivity; supported tuning and stability validation.
- Troubleshoot Product Service OOMKilled pod restarts (Exit Code 137) using Kubernetes events, logs and memory metrics; coordinated with developers to improve workload stability.
- Used CloudWatch, Prometheus and Grafana for operational visibility; checked deployment health, resource utilization and application availability after releases.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Recognition: Star of the Quarter; client appreciation for deployment and incident support.
