KRISHNA VAMSI VEERISETTI

SITE RELIABILITY ENGINEER | AWS | KUBERNETES | OBSERVABILITY

Hyderabad, India | Open to Bengaluru / Relocation | +91 9160547781 | veerisettikrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

Site Reliability / DevOps Engineer with 3+ years of experience supporting cloud-native applications and production operations on AWS. Skilled in improving reliability and scalability through Terraform-based infrastructure automation, Kubernetes operations, CI/CD, monitoring and incident response. Hands-on with Amazon EKS, Docker, Helm, Jenkins, GitHub Actions, CloudWatch, Prometheus, Grafana and Linux troubleshooting. Experienced in root cause analysis, application health monitoring, capacity/resource diagnostics and cross-functional collaboration to restore service stability and reduce recurring operational issues.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS: EKS, EC2, VPC, IAM, ECR, S3, RDS, ALB/NLB, Route 53, CloudWatch; multi-AZ design, networking, security groups

SRE & Observability: Prometheus, Grafana, CloudWatch, application and infrastructure monitoring, alert investigation, log analysis, incident response, RCA, resource/capacity analysis

Containers & Microservices: Docker, Kubernetes/EKS, Helm, Deployments, Services, Ingress, probes, HPA, RBAC, NetworkPolicies, ConfigMaps, Secrets

Automation & Delivery: Terraform modules and remote state, Jenkins, GitHub Actions, Argo CD, Git/GitHub, CI/CD, GitOps, Bash/Shell, Python basics

Linux & Networking: Linux/Unix troubleshooting, process and memory diagnostics, SSH, DNS, TCP/IP, HTTP/HTTPS, load-balancer health checks

Security & Reliability Practices: IAM least privilege, Kubernetes RBAC, Gitleaks, Checkov, Trivy, SonarQube, rolling deployments, deployment validation and rollback awareness

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Supported AWS-hosted microservices and production-facing Kubernetes workloads, investigating service availability, resource utilization, deployment health and application connectivity issues.
- Provisioned and maintained AWS infrastructure with reusable Terraform modules for VPC, EKS, EC2, IAM, ECR and load-balancing components; reviewed infrastructure plans to support controlled changes.
- Built and supported Jenkins and GitHub Actions CI/CD pipelines for testing, code-quality checks, Docker builds, image scanning, ECR publication and Kubernetes deployment using Helm and Argo CD.
- Used Prometheus, Grafana and AWS CloudWatch to review service health, CPU/memory utilization, pod restarts and application behavior; investigated alerts and correlated logs, events and metrics.
- Troubleshot Kubernetes production issues involving OOMKilled containers, readiness failures, service routing, image pulls and load-balancer health checks using kubectl, container logs and monitoring dashboards.
- Supported application resilience through health probes, Kubernetes HPA, resource requests/limits, multi-AZ cloud infrastructure and deployment verification following releases.
- Collaborated with application, database and infrastructure engineers on production incident triage, root cause analysis, corrective actions and operational knowledge sharing.
- Applied IAM least privilege, network security groups, Kubernetes RBAC and automated Gitleaks, Checkov, Trivy and SonarQube checks in delivery workflows.

SELECTED PROJECT | SUNCOO – AWS E-COMMERCE MICROSERVICES PLATFORM

Stack: AWS (VPC, EKS, ECR, ALB, RDS, S3, IAM, Route 53, CloudWatch), Terraform, Docker, Kubernetes, Helm, Jenkins, GitHub Actions, Argo CD, Prometheus, Grafana.

- Supported a microservices-based e-commerce application spanning user/authentication, product/catalog, inventory, cart, order, payment and related services deployed on Amazon EKS.
- Worked with multi-AZ AWS networking, public ALB ingress and private application/database subnets; supported routing, access controls, DNS and application-to-database connectivity.
- Maintained automated delivery from Git commits through quality/security checks, container image builds and scans, ECR publication, Helm release configuration and Argo CD synchronization.
- Production incident — Order Service 503/504: Investigated application logs and database connectivity; identified database connection pool exhaustion and supported tuning and post-fix stability checks.
- Production incident — Product Service OOMKilled: Diagnosed Exit Code 137 pod restarts using Kubernetes events, container logs and memory metrics; coordinated remediation with developers and validated recovery.
- Supported monitoring and alert investigation with CloudWatch, Prometheus and Grafana, and checked health probes, pod scaling and resource utilization during deployment validation.

EDUCATION, CERTIFICATIONS & RECOGNITION

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Star of the Quarter recognition; client appreciation for deployment and incident support.
