KRISHNA VAMSI VEERISETTI

DEVSECOPS ENGINEER | AWS | KUBERNETES | GITOPS

Hyderabad, India | Open to Relocation | +91 9160547781 | veerisettikrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience delivering AWS cloud infrastructure, Kubernetes-based microservices, secure CI/CD pipelines and GitOps deployments. Hands-on with Amazon EKS, Docker, Terraform, Jenkins, GitHub Actions, Helm and Argo CD; integrated Gitleaks, Checkov, SonarQube and Trivy into automated delivery workflows. Experienced in cloud networking, IAM, Kubernetes RBAC, monitoring with CloudWatch/Prometheus/Grafana, production incident investigation and cross-functional release support. Focused on secure software delivery, automation and platform reliability.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS EC2, VPC, IAM, EKS, ECR, S3, RDS, ALB/NLB, Route 53, CloudWatch; public/private subnet design, security groups

CI/CD & GitOps: Jenkins, GitHub Actions, Git/GitHub, Argo CD, Helm, automated build/test/deploy pipelines, GitOps delivery

DevSecOps & Vulnerability Management: Gitleaks (secrets scanning), Checkov (Terraform/IaC scanning), Trivy (container scanning), SonarQube (code quality/security checks), IAM least privilege, Kubernetes RBAC

Containers & Microservices: Docker, Kubernetes, Amazon EKS, Deployments, Services, Ingress, HPA, NetworkPolicies, probes, service accounts/IRSA

IaC & Scripting: Terraform modules, remote state, variables, plan/apply workflows; Bash/Shell, Python fundamentals, YAML

Monitoring & Operations: AWS CloudWatch, Prometheus, Grafana, application logs, alert triage, troubleshooting, root cause analysis (RCA), Linux

Related Technologies: GitLab CI/CD concepts and pipeline syntax (transferable from Jenkins/GitHub Actions; not claimed as production experience)

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Provisioned AWS cloud infrastructure with reusable Terraform modules for VPC, EKS, EC2, IAM, ECR and application load balancing; used remote state and plan review to support controlled changes.
- Built and supported Jenkins and GitHub Actions CI/CD pipelines for source validation, automated testing, SonarQube analysis, Docker builds, Trivy scanning, ECR publishing and application deployment.
- Integrated security checks using Gitleaks, Checkov, SonarQube and Trivy to surface exposed secrets, infrastructure misconfigurations, code findings and vulnerable images earlier in the SDLC.
- Containerized application services with Docker and managed EKS deployments through Kubernetes manifests, Helm and Argo CD GitOps synchronization.
- Applied IAM permissions, VPC security groups, Kubernetes RBAC, service accounts/IRSA and NetworkPolicies to support secure cloud and workload access.
- Supported production releases, Kubernetes rollout verification, application connectivity, pod health, resource utilization and troubleshooting using kubectl, logs and CloudWatch metrics.
- Monitored infrastructure and microservice health using CloudWatch, Prometheus and Grafana; investigated alerts and contributed to incident remediation and RCA.
- Partnered with development, QA and infrastructure teams to improve deployment consistency, release quality and operational documentation.

PROJECT | SUNCOO – CLOUD-NATIVE E-COMMERCE MICROSERVICES PLATFORM

Technology: AWS VPC/EKS/ECR/IAM/ALB/RDS/S3/Route 53/CloudWatch, Terraform, Docker, Kubernetes, Helm, Jenkins, GitHub Actions, Argo CD, Gitleaks, Checkov, SonarQube, Trivy, Prometheus, Grafana.

- Supported user/authentication, product/catalog, inventory, cart, order, payment and related containerized services on Amazon EKS, connected through ALB ingress and internal Kubernetes Services.
- Used multi-AZ AWS networking with public/private subnets, private application workloads, RDS connectivity and IAM-based access controls to support secure application delivery.
- Implemented a DevSecOps delivery sequence: Git change → Gitleaks/Checkov → tests/SonarQube → Docker build → Trivy → Amazon ECR → Helm/Argo CD → EKS; validated release health after deployments.
- Investigated Order Service HTTP 503/504 failures related to database connection pool exhaustion by reviewing application logs and connectivity; supported tuning and stability checks.
- Troubleshot Product Service OOMKilled restarts (Exit Code 137) using Kubernetes events, container logs and memory metrics; collaborated with developers on remediation.
- Used CloudWatch, Prometheus and Grafana to track workload health, resource consumption and application availability during release and incident support.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Recognition: Star of the Quarter; client appreciation for deployment and production support.
