KRISHNA VAMSI VEERISETTI

DEVOPS ENGINEER | CI/CD AUTOMATION | CLOUD & CONTAINER PLATFORMS

Hyderabad, India | Open to Relocation | +91 9160547781 | veerisettikrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 3.3 years of experience designing and supporting automated CI/CD workflows, containerized applications and reliable cloud infrastructure. Hands-on with Git, GitHub Actions, Jenkins, Docker, Kubernetes/EKS, Helm, Terraform, Linux, Bash and Python fundamentals. Experienced in build/test/security automation, reproducible deployments, artifact management with Amazon ECR, monitoring and production incident troubleshooting. Strong transferable foundation for automotive CI/CD and Software-in-the-Loop (SIL) engineering environments.

TECHNICAL SKILLS

Source Control & CI/CD: Git, GitHub, GitHub Actions, Jenkins, pipeline-as-code/YAML, automated build/test, deployment orchestration

Containers & Infrastructure: Docker, Kubernetes (Amazon EKS), Helm, EC2, virtual machines, Terraform modules, infrastructure as code

Cloud & Artifact Delivery: AWS EKS, ECR, EC2, VPC, IAM, S3, ALB, RDS, CloudWatch; Docker image versioning and registry workflows

Automation & Linux: Linux administration and troubleshooting, Bash/Shell scripting, Python basics, YAML

Quality & DevSecOps: SonarQube, Trivy, Gitleaks, Checkov, automated quality/security gates, deployment verification

Monitoring & Reliability: Prometheus, Grafana, CloudWatch, logs/metrics, pipeline and workload troubleshooting, incident response and RCA

Relevant Transferable Concepts: Repeatable build environments, test-stage integration, CI traceability, containerized tooling, release governance

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Developed and maintained Jenkins and GitHub Actions pipelines integrating source checkout, automated tests, static analysis, security checks, Docker builds, image publication and deployment.
- Supported repeatable container build environments using Docker and Kubernetes, with Helm-based configuration and deployment automation to Amazon EKS.
- Managed build artifacts and container image versions in Amazon ECR, supporting controlled promotion and traceable application releases.
- Integrated SonarQube for code analysis, Gitleaks for secret detection, Checkov for Terraform checks and Trivy for container vulnerability scanning within CI/CD workflows.
- Automated AWS infrastructure provisioning through Terraform modules for networking, compute, Kubernetes, IAM and supporting services; reviewed planned changes before deployment.
- Worked with development and QA teams to diagnose build failures, deployment errors, Kubernetes health issues and application connectivity problems.
- Used CloudWatch, Prometheus and Grafana to monitor infrastructure and application health; investigated resource utilization, errors, failed releases and service degradation.
- Supported Linux environments, application rollout verification, incident response and operational documentation; collaborated on root cause analysis and preventive fixes.

PROJECT | SUNCOO — AUTOMATED MICROSERVICES BUILD & DELIVERY PLATFORM

Environment: Git/GitHub, Jenkins, GitHub Actions, Docker, ECR, Kubernetes/EKS, Helm, Argo CD, Terraform, Linux, SonarQube, Gitleaks, Checkov, Trivy, CloudWatch, Prometheus, Grafana.

- Supported a multi-service e-commerce platform including user/authentication, product, inventory, cart, order, payment and related services running on Amazon EKS.
- Built a repeatable CI/CD sequence: Git changes → Gitleaks/Checkov → unit tests and SonarQube → Docker build → Trivy image scan → Amazon ECR → Helm/Argo CD deployment.
- Used Docker images and Kubernetes manifests to standardize application runtime configuration and reduce environment-specific deployment differences.
- Maintained infrastructure as code with Terraform modules and remote state; supported networking, access controls and cloud resource changes across environments.
- Investigated production Order Service HTTP 503/504 errors related to database connection pool exhaustion using logs and connectivity checks; coordinated remediation and validation.
- Troubleshot Product Service OOMKilled events (Exit Code 137) using pod events, logs and memory metrics; collaborated on workload stabilization.
- Supported post-deployment validation, service health checks, metrics dashboards and operational handovers to improve reliability.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Recognition: Star of the Quarter; client appreciation for production deployment and incident support.
