

KRISHNA VAMSI VEERISETTI

CLOUD DEVSECOPS ENGINEER | AWS SECURITY | SITE RELIABILITY

Hyderabad, India | Open to Hybrid / Relocation | +91 9160547781 | veerisettikrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 3.3 years of experience supporting secure cloud infrastructure, Kubernetes workloads, automated delivery pipelines and production reliability. Practical experience applying IAM least privilege, network segmentation, Kubernetes RBAC, infrastructure-as-code scanning, secrets detection and container vulnerability scanning. Hands-on with AWS, Terraform, Amazon EKS, Jenkins, GitHub Actions, Trivy, Checkov, Gitleaks, SonarQube, CloudWatch, Prometheus and Grafana. Experienced in incident triage, root cause analysis, security-focused deployment checks and collaboration with engineering teams. Targeting cloud security / DevSecOps roles with a strong SRE and operational resilience focus.

TECHNICAL SKILLS

Cloud Security & AWS: IAM roles and policies, least privilege, VPC public/private subnet design, security groups, EKS security controls, AWS CloudWatch; EC2, EKS, ECR, S3, RDS, ALB, Route 53

DevSecOps & Security Scanning: Checkov (Terraform/IaC checks), Trivy (container vulnerability scans), Gitleaks (secret detection), SonarQube (code quality/security checks), CI/CD security gates

Kubernetes & Containers: Amazon EKS, Docker, Helm, Kubernetes RBAC, NetworkPolicies, service accounts/IRSA, ConfigMaps, Secrets, probes, HPA, Ingress

Infrastructure & Automation: Terraform modules, remote state, plan review, Jenkins, GitHub Actions, Argo CD, Git, Bash/Shell, Python basics

Monitoring, SRE & Incident Response: AWS CloudWatch, Prometheus, Grafana, alerts, log and event analysis, availability monitoring, troubleshooting, RCA

Networking & Linux: VPC routing, NAT, load balancers, DNS, TCP/IP, HTTP/HTTPS, TLS, Linux service/process/resource diagnostics

Security Frameworks / Tools to Develop: CIS AWS Foundations, AWS Config, CloudTrail, GuardDuty — learning focus.

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Provisioned and supported AWS infrastructure using Terraform modules for VPC, EKS, EC2, IAM, ECR and application load balancing, with infrastructure changes reviewed through plan/apply workflows.
- Applied cloud security fundamentals through IAM least-privilege permissions, security-group rules, private subnet placement and controlled connectivity between application and database tiers.
- Integrated Gitleaks, Checkov, SonarQube and Trivy checks into CI/CD workflows to detect exposed secrets, insecure IaC patterns, code issues and container image vulnerabilities before deployment.
- Supported Kubernetes workload security using service accounts, IAM roles for service accounts (IRSA), RBAC, NetworkPolicies and application configuration/secrets handling.
- Built and maintained Jenkins and GitHub Actions workflows for source checks, tests, Docker builds, image scanning, ECR publication and Helm/Argo CD deployments to Amazon EKS.
- Monitored application and infrastructure health using CloudWatch, Prometheus and Grafana; investigated alerts, service failures, memory pressure and unhealthy workloads.
- Collaborated with developers and infrastructure teams to investigate production incidents, document root causes and validate corrective actions following changes.
- Supported Linux-based environments and cloud networking troubleshooting, including DNS, load-balancer health, Kubernetes service routing, pod logs and access permissions.

PROJECT: SUNCOO – AWS E-COMMERCE MICROSERVICES

Technology: AWS VPC, EKS, ECR, IAM, ALB, RDS, S3, Route 53, Terraform, Jenkins, GitHub Actions, Docker, Helm, Argo CD, Gitleaks, Checkov, Trivy, SonarQube, CloudWatch, Prometheus, Grafana.

- Supported containerized user/authentication, product, inventory, cart, order, payment and related microservices on Amazon EKS, with public ALB ingress and private application/database networking.
- Contributed to a security-conscious deployment process: Git change → Gitleaks/Checkov checks → automated tests/SonarQube → Docker build/Trivy scan → ECR → Helm/Argo CD → EKS.
- Applied Terraform-based provisioning, IAM permissions, network controls, Kubernetes RBAC and NetworkPolicies to support controlled access and repeatable releases.
- Investigated Order Service HTTP 503/504 failures caused by database connection pool exhaustion using application logs and service connectivity checks; supported remediation and stability validation.
- Troubleshoot Product Service OOMKilled restarts (Exit Code 137) through pod events, container logs and memory metrics; coordinated with developers to stabilize the workload.
- Used CloudWatch, Prometheus and Grafana for health monitoring, deployment validation, resource utilization analysis and incident investigation.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Recognition: Star of the Quarter; client appreciation for deployment and production support.
