KRISHNA VAMSI VEERISETTI

PLATFORM ENGINEER | AWS CLOUD INFRASTRUCTURE | KUBERNETES | GITOPS

Hyderabad, India | Open to Hybrid | +91 9160547781 | veerisettikrishnavamsi@gmail.com

PROFESSIONAL SUMMARY

Cloud/DevOps Engineer with 3+ years of experience delivering and supporting AWS infrastructure, Kubernetes-based microservices and automated developer deployment workflows. Hands-on with Amazon EKS, Terraform modules, Argo CD, Helm, Jenkins, GitHub Actions, AWS networking/IAM and cloud-native monitoring. Experienced in infrastructure automation, GitOps delivery, container security, incident troubleshooting and cross-team release coordination. Interested in building scalable, secure internal developer platforms and expanding into AI/ML infrastructure.

TECHNICAL SKILLS

Cloud & Architecture: AWS (EKS, EC2, VPC, IAM, ECR, S3, RDS, ALB/NLB, Route 53, CloudWatch); public/private subnets, NAT, security groups, Multi-AZ design

Platform & Kubernetes: Docker, Kubernetes/EKS, Helm, Ingress, Services, Deployments, HPA, RBAC, NetworkPolicies, service accounts, IRSA/OIDC, probes

IaC, GitOps & Delivery: Terraform modules, remote state, plan/apply, Argo CD, Jenkins, GitHub Actions, Git/GitHub, CI/CD, YAML

Observability & Reliability: Prometheus, Grafana, CloudWatch, application/pod metrics, alert investigation, RCA, production support, capacity/resource diagnostics

Security & Automation: IAM least privilege, Checkov, Gitleaks, Trivy, SonarQube, Linux, Bash/Shell, Python basics

PROFESSIONAL EXPERIENCE

Capgemini Technology Services India Ltd. | DevOps Engineer | Hyderabad

- Provisioned AWS cloud infrastructure with reusable Terraform modules covering VPC, EKS, EC2, IAM, ECR and load balancing, supporting consistent infrastructure deployments and change reviews.
- Supported containerized microservices on Amazon EKS using Helm charts, Kubernetes manifests and Argo CD GitOps workflows; coordinated application releases with development and QA teams.
- Built and maintained Jenkins and GitHub Actions pipelines integrating code validation, automated tests, SonarQube, Docker builds, Trivy image scans, ECR publication and deployment automation.
- Configured and troubleshot Kubernetes networking and workload controls including Ingress, Services, readiness/liveness probes, HPA, RBAC, NetworkPolicies and service accounts.
- Worked with VPC subnet routing, NAT gateways, ALB target health, IAM policies and IRSA to support secure connectivity and AWS service access from Kubernetes workloads.
- Monitored infrastructure and application health using CloudWatch, Prometheus and Grafana; investigated memory pressure, pod restarts, deployment errors and service availability incidents.
- Participated in production incident RCA, collaborated with developers and database teams on remediation, and documented technical troubleshooting and release procedures.
- Contributed to discussions on high availability, private networking, scalable deployments and infrastructure standardization for cloud-hosted services.

PROJECT | SUNCOO – CLOUD-NATIVE E-COMMERCE PLATFORM

Environment: AWS, EKS, Terraform, Docker, Kubernetes, Helm, Argo CD, Jenkins, GitHub Actions, ECR, ALB, RDS PostgreSQL, S3, Route 53, IAM, CloudWatch, Prometheus, Grafana.

- Platform architecture: Multi-AZ AWS VPC with public-facing Application Load Balancer, private EKS workloads and database subnets; supported user/auth, product, inventory, cart, order, payment and related microservices.
- Infrastructure delivery: Terraform modules and remote state for repeatable AWS resource provisioning; reviewed infrastructure changes and supported environment configuration.
- Developer delivery workflow: Git commit → Jenkins/GitHub Actions quality and security checks → Docker image build → Trivy scan → ECR → Helm/Argo CD GitOps deployment to EKS.
- Kubernetes operations: Maintained Deployments, Services, Ingress routing, probes, HPA, RBAC and NetworkPolicies; diagnosed service endpoints, load balancer target health and failed releases.
- Production incident — Order Service: Investigated HTTP 503/504 failures associated with database connection pool exhaustion; correlated application logs, pod status and database connectivity and supported tuning.
- Production incident — Product Service: Investigated OOMKilled restarts (exit code 137) using kubectl events/logs and memory metrics; worked with developers on workload stabilization.
- Operational visibility: Used CloudWatch, Prometheus and Grafana to monitor utilization and service health and support post-release verification.

EDUCATION, CERTIFICATIONS & RECOGNITION

Bachelor of Engineering, Mechanical Engineering | Raghu Engineering College | 2019–2022

IBM Applied DevOps Engineering (Feb 2026) | Microsoft Azure Administrator Associate (Jul 2023)

Star of the Quarter; client appreciation for deployment and incident support.
