KRISHNA VAMSI VEERISETTI

KUBERNETES ADMINISTRATION | AWS DEVOPS ENGINEER

Hyderabad, India | Open to Bengaluru | +91 7306685064 | krishnavamsi5170@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience supporting Docker-based, cloud-native applications on AWS, with hands-on exposure to Kubernetes and Amazon EKS administration. Experienced in deploying and maintaining a 6-microservice e-commerce application, troubleshooting container and workload failures, optimizing Kubernetes resource configurations, and supporting CI/CD releases. Skilled in Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Helm, Argo CD, Ansible and AWS services. Used Kubernetes events, container logs, Prometheus, Grafana and CloudWatch to investigate application and infrastructure issues.

TECHNICAL SKILLS

Docker & containerization: Docker image build/tagging, container lifecycle, Amazon ECR, image scanning, container logs and runtime troubleshooting

Kubernetes & EKS: Amazon EKS, kubectl, Pods, Deployments, ReplicaSets, Services, Ingress, ConfigMaps, Secrets, HPA, probes, resource requests/limits, RBAC, NetworkPolicies, Helm

Kubernetes administration: Workload deployment, rollout validation, pod troubleshooting, events/log analysis, OOMKilled investigation, service connectivity and resource tuning

AWS: EKS, ECR, EC2, VPC, IAM, S3, RDS, ALB/NLB, Route 53, CloudWatch, security groups

CI/CD & GitOps: Jenkins, GitHub Actions, Git, GitHub, Helm, Argo CD, build/test/scan/deployment workflows

Infrastructure & automation: Terraform, modules, remote state and locking, Ansible, YAML, Bash/Shell, Python.

Security & quality: Gitleaks, Checkov, SonarQube, Trivy

Monitoring & OS: Prometheus, Grafana, Amazon CloudWatch, Linux (Ubuntu), Amazon Linux

PROFESSIONAL EXPERIENCE

DevOps Engineer | Capgemini Technology Services India Ltd. | *Hyderabad*

- Docker-based deployments for 6 Suncoo microservices-Auth, Product, Inventory, Cart, Order and Payment -running on Amazon EKS behind an Application Load Balancer.
- Worked with Kubernetes resources including Deployments, ReplicaSets, Services, Ingress, ConfigMaps, Secrets, HPA, RBAC and NetworkPolicies to deploy, expose and manage application workloads.
- Built and maintained Docker images, applied image tagging conventions and supported publishing of container images to Amazon ECR for downstream Kubernetes deployments.
- Troubleshot pod startup, rollout and runtime failures using kubectl describe/logs, Kubernetes events and monitoring data; investigated readiness, resource consumption and service connectivity.
- Investigated a production Product Service OOMKilled incident (Exit Code 137), reviewed container memory behaviour and Kubernetes resource settings, and worked with the team on request/limit adjustments and post-change stability validation.
- Investigated Order Service HTTP 503/504 errors associated with database connection-pool exhaustion by correlating application logs and service symptoms, then collaborated with developers on connection-pool tuning and validation.
- Created and maintained Terraform configurations/modules for 8+ AWS infrastructure building blocks, including VPC, subnets, IAM, EC2, EKS, ECR, ALB and security groups; used remote state and state locking for controlled changes.
- Maintained CI/CD workflows using Jenkins and GitHub Actions, incorporating source validation, tests, SonarQube analysis, Gitleaks, Checkov, Docker image builds, Trivy scanning and ECR publishing.
- Supported Kubernetes application delivery using Helm and Argo CD, maintaining version-controlled deployment configuration and validating rollout status and application health after releases.
- Monitored application and infrastructure health using 3 observability tools—Amazon CloudWatch, Prometheus and Grafana—reviewing logs, pod restarts, CPU/memory pressure and alerts to support diagnosis.
- Applied 4 security and quality tools—Gitleaks, Checkov, SonarQube and Trivy—within the delivery workflow to identify secret exposure, infrastructure misconfiguration, code-quality and image vulnerabilities.
- Collaborated with a 12-member cross-functional project team, including a 2-member DevOps team, alongside development, QA and infrastructure stakeholders during releases, troubleshooting and root-cause discussions.

TECHNICAL DEVELOPMENT

- **EKS upgrade**: Participated in a two-minor-version Cluster upgrade path (Kubernetes 1.32 to 1.34), including API deprecation checks, control-plane sequencing, managed node groups, add-on compatibility and rollback planning.
- **Monitoring**: configured Prometheus/Grafana dashboards and alerts for pod restarts and memory pressure to support unhealthy-workload investigation.
- **Migration**: Hands on exposure with AWS DMS migration from MariaDB to Amazon RDS for MySQL using full load plus CDC, and AWS Application Migration Service workflows.

PROJECT

SUNCOO – AWS EKS CLOUD-NATIVE E-COMMERCE PLATFORM

- Suncoo is a cloud-native e-commerce application designed to provide a complete online shopping experience, from user authentication and product browsing to inventory management, order processing and payments. The platform follows a microservices architecture consisting of six independent services: Authentication, Product, Inventory, Cart, Order and Payment.
- The application is hosted on AWS, with Amazon EKS providing container orchestration and Docker enabling consistent application deployment. Incoming customer requests are routed through Amazon Route 53 and an Application Load Balancer to the appropriate microservices using Kubernetes Ingress and Services. Amazon RDS handles relational database operations, while Amazon S3 provides object storage.
- The infrastructure uses VPC networking, public and private subnets, IAM access controls and NAT Gateways to support secure communication and connectivity. The platform is designed for scalability, availability and maintainability, with Kubernetes supporting independent service scaling and automated workload management. CI/CD and GitOps practices enable consistent application releases and continuous delivery.

EDUCATION & CERTIFICATIONS

- B.E., Mechanical Engineering | Raghu Engineering College | 2019–2022
- IBM Applied DevOps Engineering | February 2026
- Microsoft Azure Administrator Associate | July 2023
